

>> LOTUS DOMINO PRACTICE

Connect. Collaborate. Innovate. Grow your business by simplifying messaging and collaboration.

Flexibility. Manageability. Extensibility. Doesn't your messaging environment need all these capabilities? In today's deskless, wireless offices, where thousands of users rely upon a messaging environment that includes email, instant messaging, calendaring, streamlined document workflow and more, Glyphic Technologies will help your organization benefit from the increased capabilities offered by IBM Lotus Domino and Lotus Notes software.

GLYPHIC'S EXPERTISE

Glyphic offers a team of Lotus professionals who can demonstrate and implement the latest Lotus Domino products. Glyphic can configure, implement, integrate and support the entire Lotus product family of collaborative tools.

We offer high-quality; high-value Lotus solutions with flexible project arrangements such as on-site consulting,

remote support and outsourced development. We have been developing, installing and maintaining Domino, Lotus Notes and Web-based Lotus Domino projects for enterprise clients for more than ten years.

FUNCTIONALITY DEFINED

Domino's popularity can be traced to its design as a truly collaborative application platform, in which email is only one of many. It is well suited for development and integration with other Web-based applications or portals. Further, the Notes client was designed to run seamlessly on several platforms, including Windows®, Linux® and Mac OS®. Domino provides a single point of access to email, calendaring and scheduling, and is integral to Web enablement; this makes it the best, simplified solution to today's complex world of messaging and collaboration.

INTEGRATION WITH OTHER ENVIRONMENTS

- Domino-to-WebSphere application conversion
- Hybrid Domino/WebSphere applications
- OLE/ActiveX automation programming in Notes
- MSOffice-to-Lotus Notes integration
- Notes/RDBMS Integration and SQL programming
- Notes C/C++ API programming

GLYPHIC LOTUS DOMINO MAIL MIGRATION SERVICES

Our consultants simplify optimization and mail migration with IBM Lotus Domino; we can provide comprehensive messaging and collaborative application development capabilities in one integrated solution. We will install and configure a single, multiple or clustered Lotus Domino servers, assist with the migration of users of an email server, and provide post-migration support.

GLYPHIC LOTUS DOMINO HEALTHCHECK SERVICES

Glyphic consultants will help ensure that your Lotus Domino server is properly configured, providing a messaging and collaboration environment that enables maximum productivity and competitiveness. Our services include preliminary exposure review from outside your firewall, analysis of physical security of your Lotus Domino environment, a consultative review process of your Domino environment with a written report and implementation of the recommendations from the report agreed upon by your IT staff.

GLYPHIC LOTUS DOMINO APPLICATION DEVELOPMENT SERVICES

Our application development consultants help you to stay competitive in today's integrated messaging environment, enabling you to maximize productivity and streamline workflow by extending the capabilities of Lotus Domino. We perform requirements-gathering, application performance analysis, maintenance, Web-enablement of existing applications, and application upgrades in addition to developing new applications.
